AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing Of Claims:

- 1-9. (Canceled)
- 10. (New) A method for detecting a collision as a function of at least one signal representing an adiabatic change of state, comprising:

performing a first comparison of the at least one signal with at least a first threshold; performing on the at least one signal a low pass filtration before the first comparison; deriving a variable from the at least one signal;

performing at least one second comparison of the variable with at least one second threshold;

detecting the collision as a function of the first comparison and the at least one second comparison; and

adjusting a sensitivity of the detection in accordance with the first comparison in that the at least one second comparison is performed only after an amount of the first threshold is exceeded.

- 11. (New) The method as recited in Claim 10, further comprising: adapting at least one of the first threshold and the second threshold over the course of time.
- 12. (New) The method as recited in Claim 10, wherein:
 the second comparison is performed for checking a product of a first time derivative and a second time derivative.
- 13. (New) The method as recited in Claim 10, wherein the method is used to detect a lateral collision.
- 14. (New) The method as recited in Claim 12, further comprising: varying the first threshold as a function of a frontal collision.
- 15. (New) The method as recited in Claim 10, further comprising: raising and then lowering the at least one second threshold.
- 16. (New) The method as recited in Claim 10, further comprising:
 as a function of a detection of the collision, performing a deployment decision for deploying a restraint device in accordance with at least one plausibility signal.
